

Rib Guard 1
Rib height up to 1 1/2"

Rib Guard 2
Rib height up to 2 1/4"

The Rib Guard is a standing seam metal roof snow guard designed to clamp on to standing metal panel without penetrating the roof. This clamp on snow guard is attached to the rib using two stainless steel set screws and multiple structural cleats. The clamp on snow guard style helps avoid potential leaks and warranty violations. The Rib Guard is available in two widths to accommodate different standing seam profiles. Customize the Rib Guard with our Color Armor for a perfect match to any roof. The terms standing seam snow guard and clamp on snow guard refer to the same style of snow guards. These standing seam snow guards are one of our most popular models due to the ease of installing.

- Made from durable, virgin grade, UV stabilized polycarbonate
- Clear polycarbonate blends in with the roof
- Attractive design for enhanced aesthetics
- Standing seam snow guard attaches to the standing seam ribs without penetrating the panel
- 5.5 inch wide base and 4 inch height for more stopping power
- Can be attached in any weather
- Y-shaped design for more effective collection of snow
- Uses no adhesives for quick and clean installation
- Clamp on snow guard helps avoid leaks and supplies ample stopping power

If you need snow guards for metal roofing, the Rib Guard is an excellent option from our snow retention systems product line. The Rib Guard is made from virgin grade, UV-stabilized polycarbonate. It offers a similar attractive design and the same broad span as The Panel Guard but adds the ability to attach to the ribs of standing seam metal roofs. The Rib Guard utilizes the strength of two structural cleats designed into the product itself against the opposing force of two stainless steel set screws that pinch the snow guard to the rib without penetrating the panel. This method of attachment is ideal when potential leaks and warranty violations need to be avoided.
