

Did You Know?

12 reasons to choose the Snow Defender™ 4500

Next Day Shipping
on most orders

Super Rigid

Embossed groove creates additional rigidity

Guards Will Outlast Your Roof

16 gauge, 304 grade stainless steel that will not corrode.

Super-Tight Powder Coating Adhesion

Each guard is tumbled in ceramic granules giving a surface texture for better powder coat adhesion.

Enduring Powder Coat Grip

Dirt and impurities such as bacteria cause powder coating to loosen over time. Each Snow Defender 4500 and 1500 goes through a 7 bath-cleaning process to ensure that there is nothing on the stainless steel that will lift the coating as the years go by.

Excellent Fade Resistance

Super-durable powders have the potential of enhancing the long-term color & gloss retention by 300%-400% over the normal TGIC Polyester powder. Super-durable powder coating is used on 97% of stocking colors.

40+ Colors in stock
